## ● HOBBIES AND INTERESTS

---

### **Cyber Security**

---

Among the many branches of IT, cyber security has always been one of my favourite. I have been spending a lot of time practicing with cyber security tools, software and specific operating systems (such as Kali Linux, a well known OS designed for digital forensics and penetration testing) and various languages used for ethical hacking. I studied the world of digital cryptography a lot too, also developing a hashing algorithm based on SHA-256 for a web application.

### **Web development**

---

Web development is my second main interest (or rather something more than a simple passion) Not only have I developed several web pages for the improvement of my personal skills and web programming knowledge, but also for online sites.

This allowed me also to enhance my abilities in the use of a lot of web technologies like Next, Node, React, Tailwind, Angular, AstroJS and so on.

### **Science**

---

Write here the description...Physics, mathematics, and astrophysics are my lifelong intellectual companions. The mystery of how the universe works, from quarks to galaxies, fuels my sense of wonder!

### **Music**

---

Music is an integral part of my life. I play battery and a little of guitar and piano, but this is the smallest part. Music and its universe (or rather its multiverse) has now become an object of my study starting from a simple soundtrack of my days.

I invest my time in listening to music and in historical musical research to get to know all the universes of modern music. A great in-depth reconstruction of the musical careers of artists and a study of their work, to get to know even more the greatest universal communication tool that man has ever created: so even "No Instrument Music" can become a real interest.

## ● VOLUNTEERING
